### Repairable Roller Stabilizer

#### Stabilizer Features:

- \* efficient air delivery
- \* less air loss (bearing)
- \* smooth running
- \* low torque
- \* repairable
- \* wear protected
- \* reduced vibration
- \* straighter holes
- \* smoother bore wall
- \* alignment spacers bit leg/rollers

The repairable roller stabiliser is the only stabiliser on the market that is **repairable** and most important, 98 % of the air from the compressors goes to blow up the cuttings. No matter how worn the stabiliser is, 98 % of the flushing air still goes to the bit. This means that the bit gets a cleaner face to cut and the bearings better cooling. In other words, **faster penetration** and

**longer bit life.** In addition to this, the stabiliser can be repaired several times, thereby saving the cost of the body every time the rollers are worn out. **Cost Savings!!**
